

Requirement Engineering - MCQs

Q1. What is a requirement according to standard definitions?

- A. A system implementation description
- B. A documented capability or condition
- C. A design solution explanation
- D. A coded software instruction

Correct Answer: B. A documented capability or condition

Q2. What is the main purpose of modelling requirements?

- A. To replace documentation entirely
- B. To reduce system cost only
- C. To check understanding and ensure communication
- D. To automate system development

Correct Answer: C. To check understanding and ensure communication

Q3. Which is a key benefit of requirement models?

- A. Increase coding speed only
- B. Provide clear communication among stakeholders
- C. Remove need for stakeholders
- D. Replace validation processes

Correct Answer: B. Provide clear communication among stakeholders

Q4. What does a stakeholder represent?

- A. Only software developers
- B. Anyone affected or interested in the system
- C. Only project managers
- D. Only system users

Correct Answer: B. Anyone affected or interested in the system

Q5. Which is a common problem in requirements engineering?

- A. Clear documentation always exists
- B. Requirements are always consistent
- C. Ambiguous expressions and conflicts
- D. No stakeholder involvement

Correct Answer: C. Ambiguous expressions and conflicts

Q6. What is a user story?

- A. A formal technical specification
- B. A detailed system design diagram
- C. A brief informal requirement description
- D. A database structure definition

Correct Answer: C. A brief informal requirement description

Q7. What format is commonly used for user stories?

- A. If-then statements
- B. As a role I want so that
- C. Input-process-output model
- D. Flowchart representation

Correct Answer: B. As a role I want so that

Q8. What is the purpose of SRS?

- A. To replace testing
- B. To define coding standards
- C. To establish agreement between user and developer
- D. To eliminate stakeholders

Correct Answer: C. To establish agreement between user and developer

Q9. Which is a characteristic of a good SRS?

- A. Ambiguous
- B. Incomplete
- C. Consistent
- D. Informal

Correct Answer: C. Consistent

Q10. What is requirements validation?

- A. Coding verification
- B. Testing system performance
- C. Ensuring requirements are correct and fit for purpose
- D. Designing architecture

Correct Answer: C. Ensuring requirements are correct and fit for purpose

Q11. When do most requirement errors occur?

- A. Testing phase
- B. Maintenance phase
- C. Analysis stage
- D. Deployment stage

Correct Answer: C. Analysis stage

Q12. What is traceability in requirements?

- A. Tracking system bugs
- B. Linking requirements across lifecycle
- C. Managing coding standards
- D. Writing user manuals

Correct Answer: B. Linking requirements across lifecycle

Q13. What is a process model used for?

- A. Coding structure
- B. Confirming requirements and interactions

- C. Database normalization
- D. UI design

Correct Answer: B. Confirming requirements and interactions

Q14. What is a use case diagram?

- A. A data storage model
- B. A summary of functional requirements
- C. A testing document
- D. A coding structure

Correct Answer: B. A summary of functional requirements

Q15. What does a use case represent?

- A. Internal code logic
- B. User perspective and functionality
- C. Database schema
- D. Hardware components

Correct Answer: B. User perspective and functionality

Q16. What is the purpose of interviews in elicitation?

- A. Coding improvement
- B. Gathering facts from stakeholders
- C. Testing performance
- D. Writing documentation

Correct Answer: B. Gathering facts from stakeholders

Q17. What type of questions encourage detailed responses?

- A. Closed questions
- B. Binary questions
- C. Open questions
- D. Multiple choice questions

Correct Answer: C. Open questions

Q18. What is a closed question?

- A. Requires explanation
- B. Encourages discussion
- C. Leads to short specific answers
- D. Generates multiple ideas

Correct Answer: C. Leads to short specific answers

Q19. What is the main drawback of interviews?

- A. Lack of information
- B. Too many stakeholders
- C. Time consuming and limited views
- D. No communication

Correct Answer: C. Time consuming and limited views

Q20. What drives business requirements?

- A. Coding standards
- B. Business objectives
- C. Testing tools
- D. Programming languages

Correct Answer: B. Business objectives

Q21. What is Business as Usual (BaU)?

- A. System failure mode
- B. Current state of operations
- C. Future system design
- D. Coding process

Correct Answer: B. Current state of operations

Q22. What causes requirements to arise?

- A. Coding errors
- B. Business changes and opportunities
- C. Testing failures
- D. UI design

Correct Answer: B. Business changes and opportunities

Q23. What is unrealistic requirement?

- A. Easily testable requirement
- B. Achievable requirement
- C. Requirement impossible to satisfy
- D. Valid requirement

Correct Answer: C. Requirement impossible to satisfy

Q24. What is solutionising?

- A. Writing requirements clearly
- B. Giving solutions instead of requirements
- C. Testing requirements
- D. Validating system

Correct Answer: B. Giving solutions instead of requirements

Q25. What is missing requirement?

- A. Duplicate requirement
- B. Requirement not documented or identified
- C. Valid requirement
- D. Tested requirement

Correct Answer: B. Requirement not documented or identified

Q26. What is overlapping requirement?

- A. Unique requirement
- B. Duplicate or repeated requirement
- C. Valid requirement
- D. Tested requirement

Correct Answer: B. Duplicate or repeated requirement

Q27. What does SRS focus on?

- A. Internal structure
- B. External behavior of system
- C. Coding logic
- D. Database queries

Correct Answer: B. External behavior of system

Q28. What is documentation style?

- A. Coding technique
- B. Way of recording requirements
- C. Testing method
- D. Programming language

Correct Answer: B. Way of recording requirements

Q29. Which is a documentation type?

- A. Algorithm
- B. SRS
- C. Compiler
- D. Debugger

Correct Answer: B. SRS

Q30. What is agile documentation?

- A. Extensive formal documentation
- B. Minimal but useful documentation

- C. No documentation
- D. Only code

Correct Answer: B. Minimal but useful documentation

Q31. What is requirement catalogue?

- A. Code library
- B. Organized list of requirements
- C. Database schema
- D. Testing plan

Correct Answer: B. Organized list of requirements

Q32. What is functional requirement?

- A. System behavior description
- B. Hardware requirement
- C. UI design
- D. Testing criteria

Correct Answer: A. System behavior description

Q33. What is non-functional requirement?

- A. Coding structure
- B. Performance and constraints
- C. Database design
- D. UI layout

Correct Answer: B. Performance and constraints

Q34. What is review in validation?

- A. Coding process
- B. Checking requirements for defects
- C. Testing software
- D. Writing documentation

Correct Answer: B. Checking requirements for defects

Q35. What is formal review?

- A. Informal meeting
- B. Structured stakeholder review
- C. Coding review
- D. Testing session

Correct Answer: B. Structured stakeholder review

Q36. What is NOT a review purpose?

- A. Finding deficiencies
- B. Improving quality
- C. Evaluating engineer performance
- D. Validating requirements

Correct Answer: C. Evaluating engineer performance

Q37. Why are models used in requirements engineering?

- A. To eliminate stakeholders completely
- B. To check completeness and consistency effectively
- C. To replace system implementation
- D. To automate testing only

Correct Answer: B. To check completeness and consistency effectively

Q38. How are use cases identified?

- A. Writing code directly
- B. Examining processes and stakeholder interactions
- C. Designing database schemas
- D. Testing user interfaces

Correct Answer: B. Examining processes and stakeholder interactions

Q39. What does a use case description include?

- A. Code snippets
- B. Happy path and alternative scenarios
- C. Database tables
- D. UI layouts

Correct Answer: B. Happy path and alternative scenarios

Q40. Why is validation required after analysis?

- A. To rewrite code
- B. To ensure requirements meet stakeholder needs
- C. To test UI
- D. To deploy system

Correct Answer: B. To ensure requirements meet stakeholder needs

Q41. What determines documentation style?

- A. Programming language
- B. Organization standards and project needs
- C. Hardware specifications
- D. Testing tools

Correct Answer: B. Organization standards and project needs

Q42. Why is traceability important?

- A. Improves coding speed
- B. Tracks requirement relationships across lifecycle
- C. Removes stakeholders
- D. Eliminates testing

Correct Answer: B. Tracks requirement relationships across lifecycle

Q43. What is a key challenge in requirements?

- A. Too much clarity
- B. Difficulty expressing requirements clearly
- C. No stakeholders
- D. Too few requirements

Correct Answer: B. Difficulty expressing requirements clearly

Q44. Why should requirements avoid ambiguity?

- A. To reduce cost only
- B. To ensure consistent understanding among stakeholders
- C. To increase complexity
- D. To delay project

Correct Answer: B. To ensure consistent understanding among stakeholders

Q45. Why should requirements be testable?

- A. For documentation only
- B. To verify system meets requirements effectively
- C. To reduce coding effort
- D. To eliminate stakeholders

Correct Answer: B. To verify system meets requirements effectively

Q82. A requirement states “system must never fail.” What issue does it represent?

- A. Clear measurable requirement
- B. Realistic and achievable constraint
- C. Not testable and unrealistic expectation
- D. Proper functional requirement

Correct Answer: C. Not testable and unrealistic expectation

Q83. A requirement says “input will be via mouse.” What is the problem?

- A. Functional clarity
- B. Proper abstraction

- C. Solutionising instead of requirement specification
- D. Non-functional constraint

Correct Answer: C. Solutionising instead of requirement specification

Q84. During validation, stakeholders disagree on requirements meaning. What issue exists?

- A. Missing requirement
- B. Ambiguity and inconsistency
- C. Performance constraint
- D. Testing failure

Correct Answer: B. Ambiguity and inconsistency

Q85. If requirements are not linked to business objectives, what risk occurs?

- A. Faster implementation
- B. Irrelevant system development
- C. Better design
- D. Improved testing

Correct Answer: B. Irrelevant system development

Q86. A process model shows many tasks but only some require IT support. Why?

- A. All tasks must be automated
- B. Only relevant interactions need system functionality
- C. No tasks require automation
- D. All tasks are irrelevant

Correct Answer: B. Only relevant interactions need system functionality

Q87. Why is SRS considered a communication bridge?

- A. It replaces coding
- B. It connects user needs and developer understanding clearly

- C. It removes documentation
- D. It simplifies testing

Correct Answer: B. It connects user needs and developer understanding clearly

Q88. Why are overlapping requirements problematic?

- A. They improve clarity
- B. They create duplication and confusion in implementation
- C. They simplify coding
- D. They reduce documentation

Correct Answer: B. They create duplication and confusion in implementation

Q89. Why should requirements be validated before sign-off?

- A. To reduce stakeholder involvement
- B. To ensure correctness completeness and fitness for purpose
- C. To delay project
- D. To rewrite documentation

Correct Answer: B. To ensure correctness completeness and fitness for purpose

Q90. Why is planning important in requirements engineering?

- A. To skip analysis phase
- B. To ensure proper estimation and structured requirement handling
- C. To reduce stakeholder involvement
- D. To eliminate validation

Correct Answer: B. To ensure proper estimation and structured requirement handling
